

Transplant Assistance

The package will facilitate the use of umbilical cord blood stem cells in the treatment of standard therapy (80 hematological and oncological diseases). Helps you through medical procedures related to treatment.

The package includes, among others:

- consultation with a hematologist or transplantologist,
- HLA transplant antigens testing,
- studies of CD34 + cells and nucleated erythrocytes,
- cell viability and leukocyte count (WBC) tests,
- testing the number of hematopoietic progenitor cells,
- transport of material to any place in the world for transplantation.

Price: 54 EUR yearly

Transplant Assistance Plus

The package will help in case of need in using of stem cells from umbilical cord blood and / or umbilical cord for treatment - both in standard indications (hematological and oncological diseases) and as part of medical experiment, e.g. in cerebral palsy. The package includes services which may help you go through medical procedures prior to transplant / administration. If a child is diagnosed with cerebral palsy or autism spectrum disorder, the package decrease the costs of treating this condition as part of experimental therapy with autologous administration of umbilical cord blood cells after qualifying the child for treatment.

The package includes, among others:

- consultation with a hematologist or transplantologist,
- HLA transplant antigens testing,
- studies of CD34 + cells and nucleated erythrocytes,
- cell viability and leukocyte count (WBC) tests,
- testing the number of hematopoietic progenitor cells,
- transport of material to any place in the world for transplantation,
- a discount on the manufacture of an advanced therapy medicinal product from umbilical cord,
- free administration in cerebral palsy and autism spectrum disorders.

* An administration is a procedure in which the patient receives cells (e.g. in cerebral palsy) that will not engraft.

Price: 64 EUR yearly
