

Confidence about stored material

Name of the package: Cord Tissue Validation

By banking umbilical cord, we want to have access to mesenchymal cells (MSC). However, their presence is never guaranteed. If you are not sure what is the quality of stored umbilical cord this package is for you.

This package allows you to obtain min 0,5millionmesenchymal stem cells within 10 months from the day the agreement with us is signed. It is recommended for parents who want to have faster access to a medicinal product made from stored stem cells. This is especially important for families where there is currently a need to use mesenchymal stem cells or there is a high risk of developing a disease in the near future.

Examination made by accredited FamiCord Group laboratory:

Price: 490 EUR once
